- Have a MODERATE risk profile
- With an investment horizon of more than five (5) years

KEY RISKS AND RISK MANAGEMENT

You should not invest in this Fund if you do not understand or are not comfortable with the accompanying risks.

Credit Risk/Default Risk. The possibility for an investor to experience losses due to a borrower's failure to pay principal and/or interest payments/amortizations in a timely manner on instruments such as bonds, loans, or other forms of security which the borrower issued.

Interest Rate Risk. The possibility that an investor may experience losses due to changes in interest rates.

Market / Price Risk. The possibility that an investor may experience losses due to changes in market prices of securities (e.g., bonds and equities).

Liquidity Risk: The possibility that an investor may experience losses due to the inability to sell or convert assets into cash immediately or in instances where conversion to cash is possible but at a loss.

Reinvestment Risks. The possibility that an investor may experience losses due to probable lower returns or earnings when maturing funds or the interest earnings of the Fund are reinvested.

Country Risk. The possibility that an investor may experience losses arising from investments in securities issued by/in foreign countries due to the political, economic and social structures of such countries.

OUTLOOK AND STRATEGY

The Philippine Gross Domestic Product (GDP) posted a decline of -4.2 percent in the first quarter of 2021. Net Primary Income (NPI) from the Rest of the World continued to decline by -75.8 percent, bringing the Gross National Income (GNI) to drop by -10.9 percent during the period. Meanwhile, the World Bank has slashed its Philippine growth projection for this year due to a deeper-than-expected contraction in the first quarter and the re-imposition of stricter quarantine measures in the capital region to contain a surge in COVID-19 cases. According to World Bank, while growth in the Philippines remains on track for recovery, the bounce back this year will likely be lower than previously expected at 4.7% from its previous projection of 5.5% and compares with the Philippine government's 2021 growth target of 6.0%-7.0%. The World Bank also lowered its growth forecast for the Philippines for next year and in 2023 to 5.9% and 6.0%, respectively, from the 6.3% and 6.2% estimates it announced in March. Deputy Gov. Dakila shared that the BSP revised the outlook for 2021 Inflation to 4% from the 3.9% forecast in the previous meeting held in May. The factors that lead to the revision include higher global oil crude prices, as well as a more favorable global growth outlook. For 2022 from 2.9% in May, it has been revised to 3%. For 2023, BSP see inflation lie within the target band, at 3%.

Last June 24, the BSP Monetary Board kept key interest rates unchanged at its meeting. BSP Gov. Diokno said that average inflation is likely to settle in the upper range of the target range of 2 to 4 percent in 2021. Price pressures on food commodities have abated amid the facilitation of meat imports to augment domestic supply. Local bond players saw this development coming after yields of actively traded bonds dropped slightly by 1.25 bps on the average.

The following are the fund's strategy and considerations:

1. The fund considered positioning in IPO offering competitive rates for its maturing investments/liquidity. The fund is experiencing impact coming from the uptrend on yields both for local and global bond market. For marketing side, push for the additional contribution to have deployments on rebalancing the return.
2. For those with favorable return, the fund considers selling security holdings to realize gains and to renew with better yield to maturity and coupon rate instruments.
