INVESTMENT OBJECTIVE & STRATEGY

The Fund intends to prevent the loss of principal and generate income. This is accomplished by investing in low-risk investments, primarily in Philippine Peso-denominated fixed-income securities and other deposit products. The Fund may invest in fixed-income securities with maximum terms to maturity of up to three (3) years and has a weighted average portfolio life of one (1) year or less. The Fund is suitable for individual and institutional investors with a "Conservative" risk profile who prefers a low level of risk. The Fund aims to achieve a rate of return higher than the **Bloomberg Philippine Sovereign Bond Money Market Index**.

CLIENT SUITABILITY

The Bank of Commerce Diversity Money Market Fund is suitable only for investors who:

- Have a **CONSERVATIVE** risk profile
- With an investment horizon of less than one (1) year
- Who are Philippine Residents Only

KEY RISKS AND RISK MANAGEMENT

You should not invest in this Fund if you do not understand or are not comfortable with the accompanying risks.

Interest Rate Risk is defined as the potential for an investor to experience losses due to changes in market interest rates. The purchase and sale of a debt instrument may result in profit or loss because the value of the debt instrument changes inversely with prevailing interest rates. The UITF portfolio, being marked-to-market, is affected by changes in interest rates thereby affecting the value of fixed income investments such as bonds. Interest rate changes may affect the prices of fixed income securities inversely, i.e. as interest rates rise, bond prices fall and when interest rates decline, bond prices rise. As the prices of bonds in a Fund adjust to a rise in interest rates, the UITF's NAVpu may decline.

Market Price Risk is defined as the potential for an investor to experience losses due to changes in market prices of securities (e.g., bonds and equities). It is the exposure to the uncertain market value of a portfolio due to price fluctuations. Market/Price Risk is closely related to Interest Rate Risk. For investments in the UITF, it is the risk that the value of the UITF may decline in view of the decline in securities prices, which may sometimes happen rapidly or unpredictably. The value of investments fluctuates over a given time period because of general market conditions, economic changes or other events that impact large portions of the market such as political events, natural calamities, etc. As a result, the NAVpu may either increase or decrease.

Liquidity Risk is defined as the inability to sell or convert assets into cash quickly or in instances where conversion to cash is possible but made at a loss. It is caused by different reasons such as trading in securities with small or few outstanding issues, absence of buyers, limited buy/sell activity or underdeveloped capital market. In UITF, liquidity risk occurs when certain securities in the UITF portfolio may be difficult or impossible to sell at a particular time which may prevent the redemption of the investment in UITF until its assets can be converted to cash. Even government securities which are the most liquid of fixed income securities may be subjected to liquidity risk particularly if a sizeable volume is involved.

Credit/Default Risk is defined as the risk of loss due to a borrower's failure to repay principal and/or interest in a timely manner on instruments such as bonds, loans, or other forms of security which the borrower issued. This inability of the borrower to make good on its financial obligations may have resulted from adverse changes in its financial condition thus, lowering credit quality of the security resulting in the lowering of the market price (market/price risk), and consequently, resulting in the difficulty in selling such security. It also includes risk on a counterparty (a party the Fund Manager trades with), defaulting on a contract to deliver its obligation either in cash or securities. For UITF, this is the risk of a possible decrease in the value of the UITF portfolio in the event that the borrower defaults on his obligation, or in the case of a counterparty default, when it fails to deliver on the agreed trade. The decline in the value of the UITF happens because the default/failure would decrease the price of the security and may make the security difficult to sell. In such case, the UITF's NAVpu will be affected by a decline in value.

Reinvestment Risk is defined as the risk of having lower returns or earnings when maturing funds or the interest earnings of funds are reinvested. Investors in the UITF who redeem and realize their gains run the risk of reinvesting their funds in an alternative investment outlet with lower yields. Similarly, BankCom-TSG, the UITF manager, is faced with the risk of not being able to find good or better alternative investment outlets as some of the securities in the fund matures.

- THE UIT FUND IS NOT A DEPOSIT AND NOT INSURED BY PHILIPPINE DEPOSIT INSURANCE CORPORATION (PDIC).
- RETURNS CANNOT BE GUARANTEED AND HISTORICAL NAVPU IS FOR ILLUSTRATION OF NAVPU MOVEMENT/FLUCTUATIONS ONLY.
- WHEN REDEEMING, THE PROCEEDS MAY BE WORTH LESS THAN THE ORIGINAL INVESTMENT AND ANY LOSSES WILL BE SOLELY FOR THE ACCOUNT OF THE CLIENT.
- THE TRUSTEE IS NOT LIABLE FOR ANY LOSS UNLESS UPON WILLFUL DEFAULT, BAD FAITH OR GROSS NEGLIGENCE.

OUTLOOK AND STRATEGY

Benchmark yields in the short term increased again, causing the yield curve to flatten. The main driver for the increase in yields for short term tenors was the relatively hawkish tone by the BSP on its monetary policy guidance. However, the last few weeks of June saw relief for the short term bonds. The planned signing of the peace deal between US and Iran and the decline of global oil prices caused investors to recalibrate their aggressive rate hike views. For June, yields in the 1-month to 6-month space increased by an average of 25 bps.

The latest developments in the peace deal between US and Iran, coupled with the slower CPI print in May, have caused BSP Governor Eli Remolona to dial back his previous comments on adopting a more aggressive stance in monetary policy tightening. Remolona has previously mentioned that he is open to an off-cycle tightening. On their last meeting, the Monetary Board has decided to raise the key rate by 25 bps for the second straight time. The press release stated that this is a "measured" move aimed at tempering the spillover effects of oil shocks stemming from the Middle East war. The Board recognizes that inflationary pressures remain strong, and that rising core inflation indicates broadening price pressures and second-round effects. They will keep a close eye for any developments on the negotiations and will revise their models accordingly.

The Fund has underperformed its benchmark by 0.11% on a month-on-month basis, and underperformed by 0.17% on a year-to-date basis. This month-on-month relative return was due to the negative mark-to-market for T-bills in the 3-month to 6-month space.

For our outlook, we believe that the factors that will shape the movement of the local bond market will be the inflation results in the coming months, the signing of the peace deal, and further guidance by the BSP on monetary policy. Global oil prices are already trading near pre-war levels. This may potentially be the catalyst for inflation expectations to ease, although this will not be abrupt. BSP may be compelled to hike rates at least one more time to help curb the secondary inflation effects as shown in the latest core CPI print. For our strategy, we are still keen on rolling the maturities to shorter term securities, particularly BSP Bills.
